Project Management

The timeline for this project was divided into 4 parts, Documentation, Research, Prototypes & Coding. Apart from the Timeline, I've used Trello to manage the project and to stay within the deadline.

Tourism New Zealand		Week One							Week Two							Week Three					
Stages	Duration	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri
Documentation	3 Days																				
Project Timeline	1 Day																				
Project Overview	2 Days																				
Research	4 Days																				
Client Research	2 Days																				
UX Research	3 Days																				
Competitor Research	2 Day																				
Style Research	2 Days																				
Target Audience / Persona	2 Days																				
Accessibility	1 Days																				
Prototypes	8 Days																				
IA / IxD	1 Day																				
Wireframes	2 Days																				
Sketch Mockups	5 Days																				
User Testing & Feedback	4 Days																				
UML Diagram	1 Day																				
Coding	8 Days																				
Coding	8 Days																				
Linting	1 Days																				
User Testing & Feedback	1 Days																				
Coding Changes	1 Days																				
Closure	3 Days																				
Review	2 Days																				
Presentation	2 Days																				
Hand-in	1 Day

1

Website design for Tourism New Zealand

Identification of the Parties

This agreement is made between Tourism New Zealand and asda/Company/Here Ltd.

Contract

A contract will be signed before the commencement of the project based on the agreement between the client and the developer. Signing the contract reflects the understanding of obligation and responsibility to the project by both the client and the developer.

Terms

A contract will be signed before the commencement of the project based on the agreement between the client and the developer. Signing the contract reflects the understanding of obligation and responsibility to the project by both the client and the developer.

Technology Used

Technologies used for this project are:

HTML5

CSS3

SASS

JavaScript

jQuery

jQuery UI

Handlebars.js

Sketch

Adobe Illustrator

Adobe Photoshop

Git

Gulp

Text Editor used for this project is:

Visual Studio Code

The project itself was met and finalised before the deadline, even though the requirements of the specs & constraints of the project are met, there are many improvements that could be made.

The code even though it works, sometimes it's hard to read and if other developers work on it then it would be useful to have comments in every type of code that it was written.

For this reason, I've divided the code into separate js files and named it as the type of usage for this project, but there's still room for improvement in this case.

```
JS alphabet-modal.js
JS bootstrap.js
JS chat.js +9
JS core.js
JS data.js
JS datepicker.js
JS handlebars-v4.0.12.js
JS highest-modal.js
JS jquery.mobile.custom.min.js
JS jquerymobile.min.js
JS lowest-modal.js
JS main.js +9, M
JS nav-select.js
JS payment.js
JS plugins.js
JS transportGenerate.js
```

~/Desktop
problem:

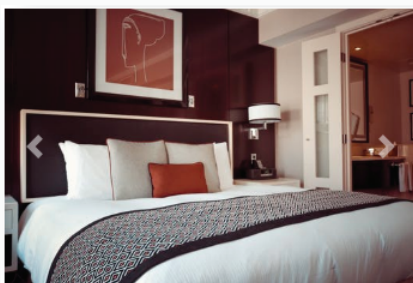

The code was written a mixture of ES5 and ES6 JavaScript, and some of the code is extended, that could be simplified, but there could be improvements to slice off the code to type less code but for the same functionality as per example:

```
if (("1 one").includes(inputValue)) {  
    answer2 = 1;  
    howManyDays();  
} else if (("2 two").includes(inputValue)) {  
    answer2 = 2;  
    howManyDays();  
} else if (("3 three").includes(inputValue)) {  
    answer2 = 3;  
    howManyDays();  
} else if (("4 four").includes(inputValue)) {  
    answer2 = 4;  
    howManyDays();  
} else if (("5 five").includes(inputValue)) {  
    answer2 = 5;  
    howManyDays();  
} else if (("6 six").includes(inputValue)) {  
    answer2 = 6;  
    howManyDays();  
} else if (("7 seven").includes(inputValue)) {  
    answer2 = 7;  
    howManyDays();  
} else if (("8 eight").includes(inputValue)) {  
    answer2 = 8;  
    howManyDays();  
} else if (("9 nine").includes(inputValue)) {  
    answer2 = 9;  
    howManyDays();  
} else if (("10 ten").includes(inputValue)) {  
    answer2 = 10;  
    howManyDays();  
} else if (("11 eleven").includes(inputValue)) {  
    answer2 = 11;  
    howManyDays();  
} else if (("12 twelve").includes(inputValue)) {  
    answer2 = 12;  
    howManyDays();  
} else if (("13 thirteen").includes(inputValue)) {  
    answer2 = 13;  
    howManyDays();  
} else if (("14 fourteen").includes(inputValue)) {  
    answer2 = 14;  
    howManyDays();  
} else if (("15 fifteen").includes(inputValue)) {
```

And could use for example
switch() and cases,
or approach the problem
differently.

And the last thing that could have a big impact for the website to look better would be to name each hotel and transportation as per their unique name, but instead used one name as a mockup for each of the transportation / accommodation cards.
